Note: This dataset already contains the 220 valid responses. We excluded respondents that took too long or too little time to respond the questionnaire(top and bottom 10% of respondents). Then, we excluded those that failed the attention check question (those that marked that they were exposed to audio-only content, which was not presented in any condition). Finally, we also excluded those that did not complete the questionnaire. Thus, no further dataset cleaning is necessary.

Main Firm-Level Variables (Table 1): WTI is *Q17*, FP is *Q18*, and Val is *Q19*.

Treatment Levels: Variable *treat* encodes the treatment levels: 1 is Certainty + Mask, 2 is Certainty, 3 is Uncertainty + Mask, 4 is Uncertainty and 5 is Text.

Main CEO-level variables (Table 2): The CEO-level variables were created as follows:

- Perf: average of *P1, P7, P13, P19*
- SA: average of *P2, P8, P14, P20*
- Know: average of *P3, P9, P15, P21*
- Comp: average of *P4, P10, P16, P22*
- Hon: average of *P5, P11, P17, P23*
